**Subject:** .au domains

It's an absolute waste of time and money.

Why would a registered business who already owns the .com.au need to then own the .au other than to stop someone trying to impersonate their brand and take market share from their business?? That's a problem that wouldn't exist if the .au wasn't available.

How did this work in other countries?

What's the reasoning behind it?

Thanks,  
Justin
